

Pure Tube Guitar COMBO class A 5W

60's cult sound. In amplifier are used JJ-electronic tubes production (d.TESLA), or new tubes Soviet (CCCP), the so-called NOS (new, old stock), produced for military purposes (high mechanical strength and long life, better performance than the current production), or ordered from other companies producing the tubes. We recommend the version with the preamplifier with Soviet triodes with a warm, soft and full sound.

Big capabilities in small device

When we build combo „Class A 5W” we use high quality components. Applied transformers have been developed specifically for this amplifier. Amplifier has one input (HIGH/LOW impedance) . The 2-point equalizer.

The amplifier is an external speaker output . Amplifier can working with feedback or without feedback – switch FB/NFB , different sound is in both positions .

We produce combo with 12” speaker JENSEN ALNICO P12R 25W (clean , tight and bright sound). For order we can assemble another type of JENSEN 12” speaker : C12R, CH12/35 , or 10” : CH10/35, P10R , C10R . It is possible to listen sound samples on www.jensentone.com .

Technical data :

- one input with sensitivity 70mV (HIGH) and 200mV (LOW)
- input impedance 1Mohm/100kohm
- LEVEL potentiometer
- equalizer 2-points (BASS, TREBLE)
- output power -5W
- tubes ECC83(12AX7) , EL84 – we recommend old rusian tubes
- socket for external speaker 8ohm
- speaker 12” 8ohm (or 10” 8 ohm)
- power supply 230V 50Hz , 40W
- dimensions 36x36x26/23 cm (with 12” speaker)
- weight around 9kg .
