

## Pure Tube Guitar Head 15W/8 Ohm , MV-3H type

60's cult sound. In amplifier are used JJ-electronic lamps production (d.TESLA), or new lamps Soviet (CCCP), the so-called NOS (new, old stock), produced for military purposes (high mechanical strength and long life, better performance than the current production), or to order for other companies producing out of the lamp. We recommend the version with the preamplifier to the Soviet triodes with a warm, soft and full sound. Two independent inputs of different types of lamps , triode and pentode.

### Big capabilities in small device

When we build head MV-3H we use high quality components. Applied transformers have been developed specifically for this amplifier. MV-3H has two inputs . Each track is a two-point adjustable tone and strengthen. The amplifier is an external speaker output , balanced output signal LINE 0dB around like a mixer or another amplifier. Head is equipped with the automatic, delayed switching the anode voltage.

We produce combo with 12" speaker (Jensen) , type MV-3H , also .

### Technical data :

- two inputs with sensitivity around:
  - 30mV (triode type preamp, channel No.2) ,
  - 100mV (pentode type preamp, channel No.1),
- equalizer 2-points , min +/- 12dB for 40Hz i 10kHz , in both inputs ,
- GAIN regulation 0-100% in both channels,
- speaker output - 8 ohm, for order can be 4 or 16 ohms load , or mixed 4 + 8 ohms,
- LINE OUT balanced 0dB ,
- automatic electronic circuit for delayed switching of high voltage ,
- amplifier including 5 pcs of lamps (2 x ECC83,1 x EF86, 2 x EL84 or Made in CCCP -NOS types),
- power supply 230V 50Hz , 70W
- dimensions 35 x 11,5 x 14 cm,
- weight 4,60 kg ,
- production : Made in EU .
